DAT One

Broker TMS Ops

DAT Broker TMS Ops is designed for freight brokers who want a simple operations system that places the most commonly used dispatch functions on a single screen.

It is a perfect choice for a new or small brokerage that wants an entry-level transportation management system (TMS). Customers who use DAT Broker TMS Ops can later transition to the full DAT Broker TMS without having to migrate data or relearn common functions.

DAT Broker TMS Ops includes the most common features used by freight brokers

☑ **Order entry:**
Enter origin and destination of the freight, pickups and stops, billing info, and line items such as fuel surcharges and assessorials. From the order entry screen you can click to see current lane rates in DAT RateView.

☑ **Post to load boards:**
Post your loads to DAT load boards and other major load boards without retyping order details. Load board accounts are sold separately.

☑ **Print to paper or PDF:**
Print work orders for your paper or digital files, and print invoices to mail to customers, each customized with your company logo.

☑ **Dispatch trucks:**
After you and the carrier agree on a rate, you can send a system-generated rate confirmation.

☑ **Track check-calls**
Mark each load as planned, picked up, or delivered.

☑ **Operations screen:**
Shows the current status of all active loads in the system.

☑ **Retrieve customer and carrier records:**
Search your database to find company and contact information for all your customers and carriers.

DAT Broker TMS Ops is easy to learn and easy to use. Online training provides self-paced learning through pre-recorded videos.
