Broker TMS Optional Modules

Optional modules save you time and money. Only pay for the features you need because your TMS should grow with you step for step.

DAT Load Board

Connect to DAT and other leading load boards

- Post to DAT, Truckstop, or any other leading load board in one click
- Find matching truck capacity quickly and easily
- Update or cancel postings for dispatched loads automatically
- Repost easily to keep loads at the top of the list

Priority Booking and Private Network

Post loads to your trusted carriers

- Automate posting and dispatch
- Create private network groups for your preferred carriers
- Offer priority loads to your preferred carriers first
- Carriers can accept the load and it will be automatically dispatched

CarrierWatch®

Quick and easy carrier qualification

- Create a new carrier record and validate insurance, safety, and authority just by entering their DOT or MC number
- Prevent accidental dispatch to uninsured carriers
- Get real-time updates to track the authority, safety rating, and insurance status of the carriers you choose to monitor
- Receive information and insurance for new carriers in one click

DAT One
Broker TMS Optional Modules

DAT Freight Tracking

One-click visibility from beginning to end

Initiate tracking with one click

Loads are automatically labeled as arrived, picked up and delivered

Load status and current location are automatically updated in the TMS

Optional email status updates can be delivered to your customers

CRM Sales Module

Boost customer service and sales success

Track sales activities instantly, including phone calls, emails, meetings, and quotes

Grow relationships with complete lead capture and follow up

Build revenues with trusted partners through the CRM

Monitor, compare, and improve productivity among sales staff

Imaging System

Move toward a paperless operation

Get integrated access to standard imaging functions directly from TMS screens

Eliminate paperwork with electronic document indexing, storage, and retrieval

Get paid quicker with Rendition Billing to automate invoicing, copying, and collating paperwork

Email invoices with BOL's automatically attached

HubTran Interface

Harness AI to automate document recognition and carrier payment

Email documents to a processing queue

Document types are identified and attached to the correct load

Carrier pay is automatically validated

You only handle exceptions, which is less than 10% of the time

DAT One — Broker TMS Optional Modules

Rating Module

Reduce typos and enable automatic pricing

Create and update charts for each customer with Rate Chart Maintenance

Set up common rate structures, including city/state, state, weights, miles, commodity, equipment, inbound rates, and zip codes

LTL Consolidation Module

Rapidly assemble orders into consolidated loads

Schedule pickups, print manifests, dispatch to a carrier, and route deliveries

Outside Agent Module

Give outside agents control over software functions and data access for seamless collaboration

Limit outside agent and remote access to only their customers and loads

Control access to accounting and reporting functions

Support individual agents and teams

Electronic Data Interchange (EDI) Module

Support all required data sets for electronic data exchange with your customers

Support the following data sets:
- Load tenders (204): receive loads from shippers
- Automatic or manual accepts/declines (990)
- Acknowledgments (997)
- Load status (214): Send pickup/delivery to shipper
- Invoices (210): Send invoice to customer

Enable manual bulk resend of all transmissions within specific dates/times

Receive complete training from an EDI specialist for set-up and deployment
